PROFESSIONAL SUMMARY

Software engineer with more than 20 years of experience, including the last five years working directly on critical systems and production AWS infrastructure. Progressed from backend development into DevOps and Platform Engineering, leading legacy application modernization and building container platforms. Works with cloud infrastructure, Docker, automation, CI/CD, observability and FinOps. Investigates issues end to end across applications, runtimes, containers, Linux, networking and infrastructure, focusing on availability, security, cost and predictable operations.

TECHNICAL SKILLS

Cloud: AWS, EC2, RDS, S3, VPC, IAM, ALB, ACM, Route 53, EFS, CloudWatch

Containers: Docker, Docker Swarm, Traefik

Infrastructure as Code (IaC) and automation: Terraform, Ansible, Python, Bash

CI/CD: GitHub Actions, Bitbucket Pipelines

Observability: Grafana, Prometheus, Loki, Alloy

Practices: DevOps, Platform Engineering, SRE, FinOps, incident management, change management and technical leadership

PROFESSIONAL EXPERIENCE

Senior Developer - working in DevOps and Platform Engineering

Seventh | Apr 2021 - Present | Palhoça, SC, Brazil

- Operates and improves AWS infrastructure with EC2, RDS, S3, VPC, EFS, ALB, ACM, Route 53, IAM and CloudWatch, aligning architecture, security and costs with the operation of critical production systems.
- Built and maintains a Docker Swarm platform and migrated its edge from a single Traefik instance to ALB, ACM and Traefik distributed across three Availability Zones, after validating the change in a disposable staging environment.
- Led the technical modernization of legacy PHP applications into containerized workloads, separating PHP-FPM, Nginx, WAF, queues and schedulers, and declaring configuration, secrets, persistence and health checks for each environment.
- Implemented observability with Grafana, Prometheus, Loki and Alloy, including dashboards, alerts, non-blocking logging, incident investigation and operational runbooks.
- Investigated a cost and inter-AZ traffic anomaly by correlating billing, CloudWatch, Prometheus, networking and Docker processes; identified the cause and validated a reduction of more than 99% in unwanted traffic.
- Inventoried AWS resources and led the classification of more than 100 taggable resources, strengthening governance, ownership and future cost allocation as part of a FinOps initiative.
- Automated deployments and operations with Bitbucket Pipelines, Python and Bash, and used Terraform to reproduce a critical change before promoting it to production.
- Established ADRs, runbooks, change records, risk assessments and operational communication to support technical decisions and safe execution.

PROFESSIONAL EXPERIENCE (CONTINUED)

Senior PHP Developer

Conectaa Sistemas | Aug 2014 - Feb 2021 | Florianópolis, SC, Brazil

- Developed and maintained corporate web applications with PHP, Laravel and Drupal, focusing on integrations, legacy system evolution and institutional applications.
- Built integrations between corporate systems and portals through APIs and services, also working in Linux environments and supporting critical applications.
- Delivered solutions for legislative institutions in Santa Catarina, Bahia and Florianópolis.

Freelance Web Developer

Self-employed | 2011 - 2014

Developed and maintained web applications with PHP, JavaScript, relational databases and Linux, balancing independent projects with studies in Clean Code, Design Patterns, architecture and automated testing.

Mid-level PHP Developer

Fundação CEEE de Seguridade Social | Nov 2007 - Mar 2011 | Porto Alegre, RS, Brazil

Developed and maintained internal corporate and self-service systems with PHP, CodeIgniter and PostgreSQL for operational and administrative teams.

Systems Developer

Sapient AG2 | Jan 2003 - Nov 2007 | Porto Alegre, RS, Brazil

Developed web applications and corporate systems with Microsoft .NET and PHP for clients in the financial, industrial and retail sectors.

Early software development experience

Fundação Educacional and Data Bank do Brasil | 2001 - 2003 | RS, Brazil

Developed desktop systems, library solutions, databases and integrations with electronic devices.

SELECTED PROJECTS

aws-swarm-lab - Highly available Docker Swarm on AWS

Public, reproducible infrastructure-as-code lab using Terraform, Ansible, Docker Swarm, EC2, EFS, ALB, ACM and Traefik. github.com/robmoraes/aws-swarm-lab

Distributed Systems Lab - Original DevOps technical content

Educational channel organized into progressive series. The first published season has 10 episodes and manually builds the foundation of a Docker Swarm lab on AWS, progressing from EC2 and port-based exposure to a stack with WAF, a domain, Traefik and TLS. Includes a public playlist and a companion quiz produced with Quick Quiz, whose administration tool uses OpenAI to generate and translate questions on demand.

Pinleaf - Linux desktop application

Open-source Python application with CI, tests, GitHub Pages, Debian packaging and automated releases through GitHub Actions. github.com/robmoraes/pinleaf

EDUCATION

Higher Education Technology Program in Data Processing - Universidade Católica de Pelotas | 1998-2000

DevOps Ninja: Docker, Kubernetes and Rancher - Udemy | Jan 2022 | 18 hours
